SUMMARY

Driven and detail-oriented postgraduate student pursuing M.Tech in computer Networking with a strong foundation in Python, software development, and data analytics. Hands-on experience in building real-world projects involving AI concepts, web development, and database management. Eager to contribute technical and analytical skills to internship or entry-level roles in a collaborative and growth-oriented environment.

EDUCATION

University of Visvesvaraya College of Engineering, Bengaluru, Karnataka	2024 - 2026
Pursuing MTech in Computer Networking Computer Science and Engineering	CGPA : 8.87
Vivekananda Institute of Technology, Bengaluru, Karnataka	2020 - 2024
BE in Information Science & Engineering	CGPA : 8.27

SKILLS

Programming and Scripting Language: Python, HTML, CSS

Data Science: NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn

Database and Data Visualization: SQL, Power BI

Computer Networking (Intermediate)

Tools: Visual Studio Code, Google Colab

Soft Skills: Problem Solving, Adaptability, Communication, Analytical Thinking, Time Management, Attention to Detail

PROJECTS

- AI-Powered Financial Fraud Detection & Risk Analytics System | Python, Pandas, Scikit-learn, Streamlit, SMOTE**
- Developed an end-to-end machine learning system to detect fraudulent financial transactions. Handled highly imbalanced datasets.
 - SMOTE to improve fraud detection recall. Trained and optimized Random Forest models for risk prediction.
 - Built interactive analytics dashboard with executive summary and real-time updates.
- Machine Learning-Based Network Intrusion Detection System | Python, Flask, Random Forest, XGBoost, MLP**
- Built a Machine Learning-Based Network Intrusion Detection System using Python to detect malicious network activities.
 - Trained and compared Random Forest, XGBoost, and MLP models with standard evaluation metrics. Integrated models into a Flask web application with a responsive UI for intrusion analysis.
- Leaf Care AI | Python, Tensorflow, CNN, Image Preprocessing, XAI, Flask**
- Built a CNN-based leaf disease detection model with advanced preprocessing, augmentation, and improved training pipelines using TensorFlow.
- Added Explainable AI (Grad-CAM heatmaps) to highlight infected regions and make model predictions transparent and interpretable.
 - Designed the system to support small-scale terrace farming and urban gardeners, enabling easy disease identification .
- Building Customer Segmentation Model | Python, PowerBi, K-Means Clustering**
- Implemented a customer segmentation model using K-Means Clustering for precise marketing and improved customer satisfaction. Assessed model performance with silhouette scores and validated result through domain expertise.
 - Applied insights from segmentation to enhance personalized marketing, product recommendations, customer retention strategies, contributing to increased revenue and competitive advantage.

EXPERIENCE - INTERNSHIP

Data Analytics – Student Intern from Edunet Foundation	Feb – Apr 2024
- Utilized Power BI for data visualization, creating interactive reports to derive actionable insights. - Worked on a project titled Customer Segmentation Model using K-Means clustering enhancing targeted marketing strategies.	

ACHIEVEMENTS AND CERTIFICATIONS

- Led my internship team, guiding and coordinating a group to successfully achieve project objectives and goal
- Advanced Data Analytics from Next Gen Employability Program by EY
- Data Analytics with Python and Cloud Computing from NPTEL
